PROFILE

Systems Engineer with more than 10 years of experience supporting large enterprise infrastructure, virtualization, backup and recovery, industrial IT/OT systems, and technical project delivery in global manufacturing environments. Proven ability to manage infrastructure upgrades, vendors, contractors and coordinate cross-functional projects.

PROFESSIONAL EXPERIENCE

SYSTEMS & INFRASTRUCTURE ENGINEER DRAGONFLY HEALTH

JULY 2026

- Lead IT infrastructure integration for M&A activities from day 1 through post close.
- Execute server, network, cloud, and identity migrations across on-premise, hybrid, and cloud environments.
- Standardize Microsoft 365, Google Workspace, Active Directory, and Microsoft Entra ID environments.
- Manage firewall, network, and security infrastructure integrations with minimal business disruption.
- Collaborate across infrastructure, security, and applications teams to deliver successful enterprise migrations.

SITE SYSTEMS MANAGER – TECHNICAL SERVICES EVONIK CORPORATION

SEP 2022 – MAY 2026

- Led infrastructure and technology upgrade projects up to \$500k across multiple manufacturing facilities, coordinating vendors, contractors, and internal technical teams.
- Administered enterprise access control platforms ensuring system availability, security, and lifecycle support.
- Utilized SAP and proprietary project management platforms for project and investment management.
- Supported multi-site infrastructure environments including servers, fiber infrastructure, access and surveillance control systems, emergency communications.

SYSTEMS ENGINEER – IT SERVICES EVONIK CORPORATION

JAN 2017 – SEP 2022

- Managed approximately 60 VMware ESXi hosts across the United States, Canada, and South America supporting manufacturing operations across the United States, Canada, and South America.
- Performed infrastructure upgrades, patching, firmware maintenance, troubleshooting, and lifecycle management for virtualized server environments.
- Coordinated maintenance windows and change activities involved server infrastructure, storage, and virtualization platforms.
- Collaborate with internal teams to support infrastructure deployments, connectivity troubleshooting and firewall rule implementations.
- Supported enterprise backup and recovery operations to maintain business continuity and disaster recovery readiness.
- Participated in global on-call support and escalation rotations.
- Developed technical documentation, operational procedures, and knowledge articles supporting enterprise operations.
